Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
1. Statement			
Novelty (N)	Claims	1-34	YES
	Claims		NO
Inventive step (IS)	Claims	1-34	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-34	YES
	Claims		NO
2. Citations and explanations (Rule 70.7)			
Reference is made to the following document:			
D1: WO 8704476			
<p>Document D1 is considered the prior art closest to the subject matter of claim 1 and discloses (page 3, line 29 - page 7, line 22): a nonwoven mat that contains 10 to 60 vol.% of fibres that are 6.35-25 mm in length and are made from a high-performance thermoplastic (glass or carbon), 3 to 50 vol.% of melt fibres (aramid) that are 16 mm in length and 10 to 90 vol.% of binding particles (made of vinyl resins or olefins, or...). The nonwoven mat may also contain additional additives.</p>			
<p>The subject matter of claim 1 thus differs from the nonwoven mat known from D1 in that the first fibre and the at least one reinforcing fibre are bonded using 1-10 wt.% of a binding agent only at the crossing or contact points and in that the nonwoven mat has a mass per unit area of 8 to 400 g/m².</p>			

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

The subject matter of claim 1 is thus novel (PCT Article 33(2)).

The present invention can therefore be considered to address the problem of producing a nonwoven mat such that splaying of the reinforcement fibres can be avoided for producing a composite material and of being able to produce very thin moulded parts with higher than average strength during the pressing procedure.

The solution to this problem as proposed in claim 1 of the present application involves an inventive step (PCT Article 33(3)) for the following reasons: the prior art does not disclose bonding the fibres only at the crossing or contact points, or a low mass per unit area of the nonwoven mat of 8 to 400 g/m², so as to be able to avoid splaying of the reinforcement fibres for producing a composite material and to be able to produce very thin moulded parts with higher than average strength during the pressing procedure.

Claims 2-19 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.

Method claim 20 and dependent claims 21-26 for producing a nonwoven mat according to at least one of claims 1 to 19, and product claim 27, as well as dependent claims 28-34, which relate to a fibre
